# Introduction

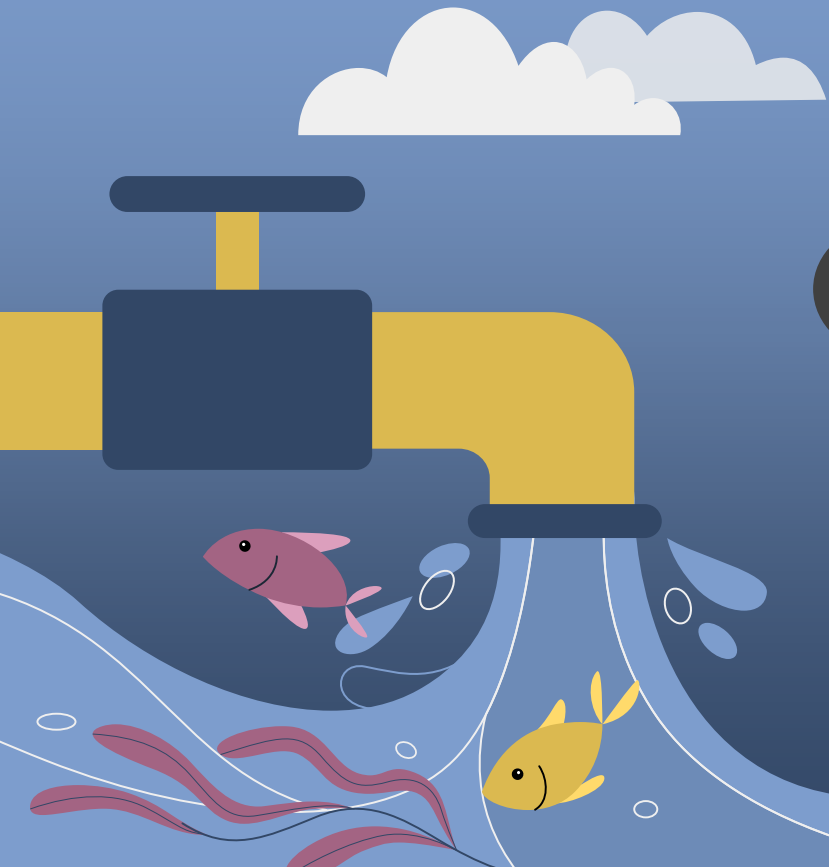

As per increase in water pollution there is need of controlling pollution in water is finished by monitoring water quality.

Our system consists of various sensors which will compute the standard values of water in real-time for effective action and accurate and only less manpower required

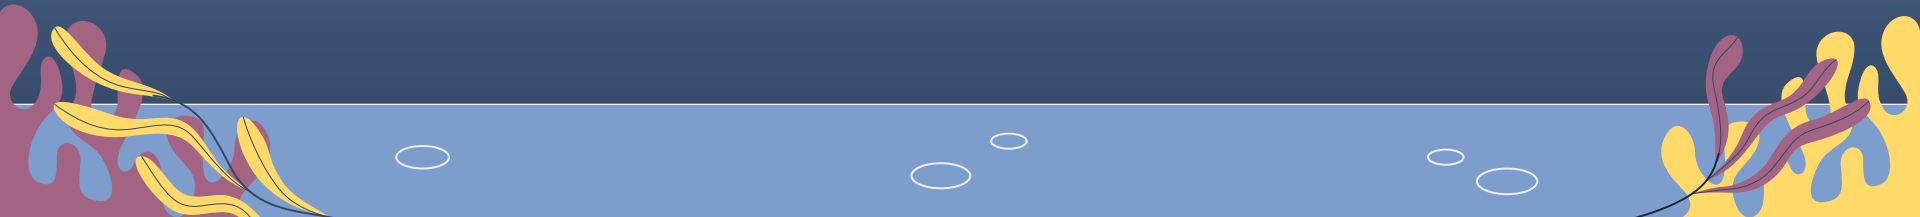

## Objective

02

To develop an IoT system that would  
monitor the quality of water

03

# Requirement Equipment

NodeMCU esp8266

Breadboard

jumper wires

TDS sensor

Turbidity sensor

pH sensor

04

# Architecture

# ARCHITECTURE

05

# Tools and Technology

Arduino IDE

Firebase

MIT App Inventor

Visual Studio

ReactJS

Wireshark

# 06 System Design

# Implementation 07

# The Firebase

TOTAL DISSOLVED SOLUTES: 0

TURBIDITY VALUE: 52 

led: "1"

pH VALUE: 6.01452

# Web application Dashboard

## Water Quality Dashboard

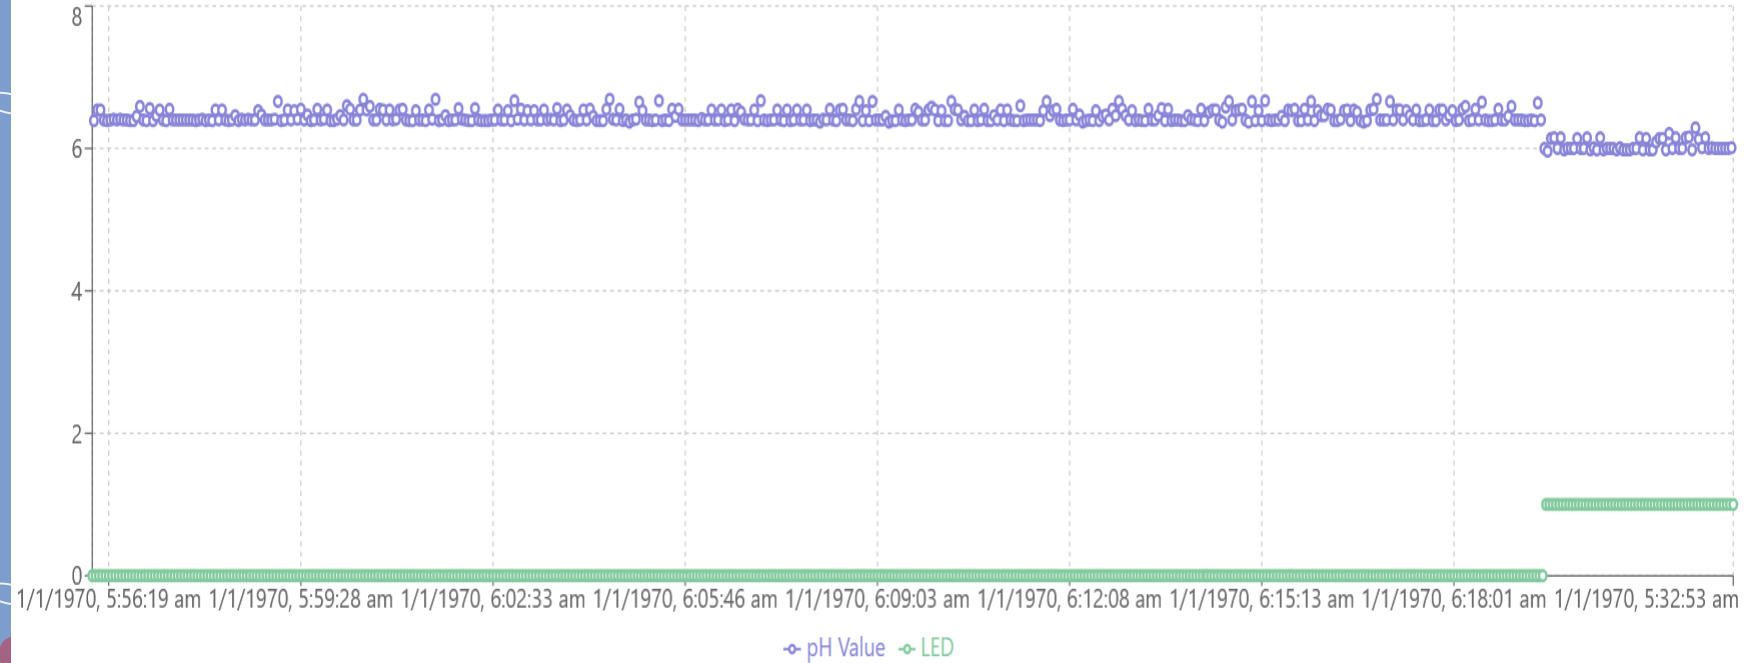

Property	Value
ph	6.16355
TDS	0
turbidity	52
LED State	ON
Water Quality Status	Status: Unsafe to drink Reason: Water does not meet recommended quality standards.

OFF

Manual Override OFF

# Logging of the water quality

## Logging of the water quality

# 08 CONCLUSION

This system takes real-time data from the sensors, log the data onto the database and also provide them to the web and mobile application.
